RENZMANN ROTO 140 distiller

The RENZMANN distillation units type ROTO recover contaminated solvents through batch distillation. The material to be distilled is filled into the distillation vessel in batch quantities or continuously. A rotating scraper system permanently cleans the heat transfer surfaces; thus it is possible to distil even highly contaminated solvents or waste inks, to reduce the residue to a large extent, and to discharge it automatically.

**Filling capacity: approx. 140 l
Vessel capacity: approx. 300 l**

**Distillation output: approx. 30-60 l/h
(depending on the solvent values may differ)**

Electric heating: 9 kW
